

2025 Beach Renourishment Updates

Dear Captiva Community,

We're pleased to share an update on the 2025 Captiva Beach Renourishment Project. Work is progressing steadily along the shoreline, and we appreciate your continued support and patience as we restore and strengthen our island's most vital natural asset—our beach.

🔑 Current Status (as of October 1st)

As shown on the attached maps:

- Construction began in the southern portion of Captiva on September 25 and is progressing southward.
- The first subline pipe is on the beach and is active. This is where sand is pumped ashore from the dredge vessel stationed offshore.
- Sand placement and grading are currently active in the yellow zone (see Map 2), with some areas already completed in green. Red areas have not yet been constructed.

🚧 What to Expect

- Construction activity is continuous, 24 hours a day, including weekends, weather permitting.

- Equipment, pipelines, and lighting will be present on the beach.
- Our contractor, Great Lakes Dredge & Dock, is committed to maintaining public safety and minimizing disruptions.

Thank You for Your Patience

We understand this project may cause temporary inconvenience, but we're confident the results will benefit all residents, visitors, and wildlife for years to come. A wider, healthier beach improves storm resilience, wildlife habitat, recreational space, and property protection.
